(54) Title: METHOD AND SYSTEM FOR SIMULATING COMMUNICATIONS NETWORKS, OBJECT AND COMPUTER PROGRAM PRODUCT THEREFOR

(57) Abstract: A method for simulating a telecommunications network through objects (13) that model a respective set of network modules or devices provides for the insertion, for every module or device of said set, of at least one respective interfacing object (13a', 13a'') with the other modules of said set. The above interfacing object (13a', 13a'') has an external side (A) and an internal side (B) with respect to the module or device. Such external side (A) has a character that is independent from idiosyncrasies of such module or device and is therefore uniform for all modules or devices. When there are a plurality of different implementations (13b', 13c'; 13b'', 13c'', 13d'') of the same module or device, it is possible to provide both an unique interfacing object (13a', 13a'') for all different implementations, and a respective interfacing object for every single implementation.
